Eindhoven, Netherlands

SUMMARY

My experiences, with a bias on numerical methods, encompass electronic and mecha-
tronic systems development, technical sales & support across several industries (Energy
& Aerospace, Electronic Design Automation and Semiconductors).

Leveraging such a background, I am currently helping designers to develop more effec-
tively towards system-level compliances.

EXPERIENCE

Sr. Engineer - Design Enablement

NXP Semiconductors

03/2022 – Present

Eindhoven, Netherlands

- Developed electromagnetic simulation flows for SoCs and antenna systems.
- Enhanced vendor solutions to meet design and cloud platform integration require-
ments.
- Developed problem resolution automation scripts and utilized parametric reduced
order models.

Technical Account Manager

Ansys

03/2020 – 03/2022

Utrecht, Netherlands

- Drove customer satisfaction by providing multi-disciplinary technical support and
managing global presales activities for the Ansys portfolio.
- Led teams to architect flows across disciplines, focusing on requirements and critical
success factors.
- Advised global sales and account engineers on addressable initiatives and pipelines
with preliminary requirements and solutions visions.

Sr. Applications Engineer

Ansys

01/2019 – 03/2020

Utrecht, Netherlands

- Executed presales activities for electronic systems across industries, supporting high-
frequency solutions and EMC flows across EMEA.
- Led technical alignment with customers on automotive electrification and connectiv-
ity projects, successfully delivering on consulting services and trainings.

Lead EIC Engineer - Testing

Baker Hughes

07/2016 – 12/2018

Florence, Italy

- Led the development of industrial, ATEX compliant, distributed data acquisition sys-
tems to streamline tests execution timelines from months to weeks.
- Resolved 5+ electromagnetic interference issues in NPI validations and factory accep-
tance tests, contributing to best practices.
- Received an innovation award for patent disclosure of the Structural Vibration Mon-
itoring System and multiple rewards for innovative solutions and customer impact.

EIC Engineer - Testing

Baker Hughes

06/2013 – 06/2016

Florence, Italy

- Executed on electrical, instrumentation and controls design activities for GE Oil & Gas
NTI/NPI (GT, CC, ST), focusing on uncertainty-assessed special instrumentation for
performance validation.

EDUCATION

Doctor of Philosophy - PhD, Electronics
Engineering

Università degli Studi di Firenze

01/2011 – 02/2014 Florence, Italy

School of "RF, Microwaves and Electromagnet-
ics". Computational Methods focus. With grant
(Jan 2011 - Jun 2013).

Master's Degree, Electronics Engineering

Università degli Studi di Firenze

10/2007 – 04/2010 Florence, Italy

Erasmus Placement/LLP framework thesis
semester at the Lehrstuhl für Theoretische
Elektrotechnik, Universität des Saarlandes.
With grant (Sep 2009 - Mar 2010).

Bachelor's degree, Electronics Engineering

Università degli Studi di Firenze

01/2003 – 04/2008 Florence, Italy

Thesis project at the Laboratorio di Tecnologia
per i Beni Culturali, Università degli Studi di
Firenze.

High School Diploma

École Autonome Belge à Bujumbura

09/1996 – 06/2002 Bujumbura, Burundi

AWARDS

 **EMEA TAM of the Year | Ansys
(01/2021)**

Award for customer and industry focus

 **Learn and adapt to win | BHGE
(07/2018)**

Patent impact award for the disclosure of
"Module with sensors arrangement"

 **Customers determine our success |
BHGE (03/2017)**

Bronze award for the GE Aviation's Cata-
lyst FETT advanced test instrumentation
consulting

 **Customers determine our success | GE
(10/2016)**

Bronze award for the successful execu-
tion of the vibration monitoring system
ZADCO customer structural vibrations
acceptance tests

 **Learn and adapt to win | GE (03/2016)**

Bronze award for the co-generation plant
cost savings on the SNC1-2 steam tur-
bine performance validation

- Contributed to rapid test executions through internal standardization and inventory optimization.

Startup Co-founder

Università degli Studi di Firenze

📅 06/2012 - 06/2013

📍 Florence, Italy

- Initiated a spin-off, ElectroSoft, to provide efficient numerical codes for design problems.
- Led team promotion and value proposition pitches to business angels.
- Developed first opportunities in the defense industry.

PROJECTS

Bearings loading test rig

Baker Hughes, a GE Company

📅 05/2018 - 12/2018

📍 Florence, Italy

- Conceptual design of a novel bearings loading test rig aimed at validating bearings NTIs.
- Investigated on modeling methods of EM coupling between power (variable speed drive system) and signals cabling systems to predict potential interference issues.

GE Aviation's Catalyst

Baker Hughes, a GE Company

📅 06/2017 - 12/2018

📍 Prague, Czech Republic

- Led special instrumentation design and global technical reviews of FETT with design and testing teams (Czech Rep., Poland, US, Canada)
- Contributed to >4 M\$ cross-P&L project and customer satisfaction.

Gas Turbine embedded SAW sensors

Baker Hughes, a GE Company

📅 02/2018 - 12/2018

📍 Florence, Italy

- Co-advised MEng thesis student with University of Florence to investigate into SAW sensors high frequency numerical modeling for accuracy control of temperature measurements.

LM9000: 65 MW aeroderivative gas turbine

Baker Hughes, a GE Company

📅 06/2018 - 12/2018

📍 Florence, Italy

- Contributed to conceptual instrumentation design and test rigs erection, data acquisition architecture and control system design by technical and HAZOP reviews.

Cross'd

📅 01/2018 - 11/2018

📍 Florence, Italy

- Social networking app PoC based on Bluetooth Low Energy ranging. Made with Apache Cordova and an AWS EC2 instance

BLE Asset Tracking

📅 07/2017 - 09/2017

📍 Florence, Italy

- Sub 5\$/Unit PoC of BLE tags (TI's CC2640) with firmware optimized for long-battery life, aimed at asset tracking and inventory management.

GE Power slip-ring digital telemetry

Baker Hughes, a GE Company

📅 04/2017 - 05/2017

📍 Florence, Italy

Learn and adapt to win | GE (10/2015)

Bronze award for the introduction and validation of an effective, cost-saving, structural vibrations digital integration algorithm aimed at accurately deriving speed & displacements measurements from ATEX-compliant accelerometers

External focus | GE (06/2014)

Bronze award for the RCA activities on Cessao Onerosa, ADRE monitoring system EMI noise mitigation and customer assurance

Giorgio Barzilai Prize | SIEm (09/2012)

Best paper award for young researchers, for the work "Model order reduction in Finite Element analysis of phased array antennas" presented at the XIX RiNEm

Ph.D. studies grant | UniFi (12/2010)

Full tuition fees and allowance for research on Electromagnetic Compatibility modeling techniques in variable speed drive systems - with GE/Nuovo Pignone

Dean's listing | UniFi (04/2010)

Commissione di Laurea Specialistica in Ingegneria Elettronica presieduta dal Prof. Piero Tortoli (Prot. 1051 n. class. III/9.1.2 del 24 Maggio 2010)

LLP/Erasmus Placement grant | UniFi (10/2009)

Thesis work semester mobility support at Universität des Saarlandes

CERTIFICATIONS

Professional Engineer,

Università degli Studi di Firenze

COURSES

Command of the Message

Ansys

📅 06/2020

📍 Remote

JAWS: Just Another Way of Selling

Ansys

📅 02/2020

📍 Paris, France

HBM Dynamic Load Cells

GE Oil & Gas

📅 05/2016

📍 Bologna, Italy

GE Crotonville: Delivering Customer Impact

GE Oil & Gas

📅 03/2016

📍 Munich, Germany

GE Control Valves — Advanced

GE Oil & Gas

📅 09/2015

📍 Florence, Italy

- Ran Ansys HFSS simulations to optimize signal integrity over slip-ring connections (power supply and ethernet transmission lines)
- Achieved shrinking of the rings spacing leading to manufacturing costs reduction
- 4 weeks-FTE cross-P&L billing and customer satisfaction

Wet gas compressors at KLAB

GE Oil & Gas

02/2016 - 06/2016 Haugesund, Norway

- Designed and procured validation equipment for ATEX zone 1 test bench.
- Developed Ex-d antenna and low noise amplifier system for GPS synchronization on NI's PXI systems.
- Managed IEC 60079-11 simple apparatus compliance on load cells upon using extremely low voltage (1.5 V) Ex-ia Wheatstone bridge conditioners.

Power density centrifugal compressor

GE Oil & Gas

03/2014 - 05/2016 Florence, Italy

- Led the commissioning Fieldbus Foundation use in testing lab for more than 240 pressure transducers (0.1% uncertainty) upon identifying the proper Firmware configuration which enabled for massive and accurate pressure measurements.
- Managed capacitive vibration probes ATEX-compliance.
- Developed electrostatic numerical model to predict capacitance variation in various surroundings and target shape conditions.
- Contributed to DM37/08 compliance of the test rig contract specification, including power and signaling cabling selection and proper installation.

SNC1-2 steam turbine performance evaluation in 6.2 MW cogeneration plant

GE Oil & Gas

09/2015 - 04/2016 Florence, Italy

- Defined novel pressure hookups method at lower cost and better performance to achieve accuracy controlled inter-stage enthalpy measurements according to ASME PTC 19.11.
- Programmed a CAN to Modbus TCP embedded module to enable static torque measurements on a MagCanica telemetry.

GE-6G PowerGen Module Structural Vibrations Monitoring System

GE Oil & Gas

11/2015 - 03/2016 Massa, Italy

- Developed ATEX-compliant distributed acquisition system for more than 150 vibration measurement points, with 40 kHz analog bandwidth, WiFi5 backhaul to storage and real-time monitoring, with GPS or daisy-chain clock distribution synchronization
- Hands-on design of 3D assemblies and BOM for timely delivery and cost optimization of certified equipment in less than 4 months (vs typ. 8 months).
- Introduced and consolidated with third party metrology a software based velocity and displacement real-time computation from accelerometers, achieving direct \$150k savings, and subsequent lab processes OPEX benefits.
- Customer value delivered as onsite Turbomachinery Modules structural commissioning with patented solution

NovalT16 gas turbine, bearings and cooling component tests

GE Oil & Gas

04/2014 - 10/2015 Florence, Italy

- Design and validation of smartbox (field datalogger) for analog signals.
- Defined EMC-aware measurement loops design to achieve noise immunity and enhanced measurement accuracies, rigorously applying EN 61000 guidelines (CEN-ELEC25).

GE Aviation's GE9X High Pressure Compressor

GE Oil & Gas

📅 01/2014 - 04/2014

📍 Massa, Italy

- High density data acquisition system design for GE Aviation's compressor test in Massa.
 - Performed mitigation on EMC noise due to 130 kW variable speed ventilation system
-

BCL306 and BCL317 centrifugal compressors rotordynamics

GE Oil & Gas

📅 06/2013 - 03/2014

📍 Florence, Italy

- Performed an Ex-p execution of stability's magnetic exciter, contributed to the resolution of customer's opened nonconformity on rotordynamic vibrations upon conducting an electromagnetic interference on Bently Nevada's 3500 RCA.
-

Finite Element Software (FES)

Università degli Studi di Firenze

📅 06/2011 - 02/2014

📍 Florence, Italy

- FES is an open source framework for the development of "ad-hoc" simulation software aimed at a rapid implementation of novel numerical methods based on the Galerkin method. Core formulations verified reusing meshes from commercial packages (Comsol, HFSS)
-

Phased array antennas model order reduction

Universität des Saarlandes

📅 10/2009 - 02/2010

📍 Saarbrücken, Germany

- Developed in Matlab efficient near-to-far-fields formulations for fast electromagnetic radiation computation in large finite elements problems exploiting model order reduction with spectral interpolation for beam steering and pattern angles
 - Modeled a large patch antenna array, assessing accuracy and performances through mesh/model export from Ansoft HFSS v11
-

RS-232 modem in ISM 868 MHz band

University of Florence

📅 01/2007 - 04/2007

📍 Florence, Italy

- Designed and prototyped an 868 MHz wireless link for a ground penetration radar remote control over RS-232 protocol
 - C-coded the PIC microcontroller FW and optimized in Assembly to guarantee the full-duplex operation over half-duplex TI's CC1100 radio.
 - Evaluated the performance of the wireless link in open field
-

RECOMMENDATIONS

Mariano Morales

Senior Director, Global Technical Account
Management @ Ansys (A Synopsys company)

📅 23/05/2022

📍 Madrid, Spain

"During his tenure with Ansys, Laurent performed consistently above expectations. He showed a tremendous ability to master new technology domains out of his comfort zone, to team up with colleagues from different functional groups and demonstrated an extreme customer focus that made him successful. He is always eager to learn and evolve as a technical leader."

Tiziano Fiore

Head of Global Product Management @ ABB

📅 09/09/2020

📍 Helsinki, Finland

"Laurent is a brilliant engineer with entrepreneurial mindset. He approaches technical problems critically and with a deep knowledge of physics that allows him to handle any engineering challenge. Laurent is a great manager and a strong communicator always willing to help others and share ideas and solutions with anyone in the team. I have learnt a lot from him, sitting side by side, working together on challenges in turbomachinery validation projects. I greatly recommend Laurent for business development and executive roles."
